-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Objections

1. Claim 5 is objected to because of the following informalities:

Claim 5, line 2, "the distance" should be changed to --a distance--. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1 and 8-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Takenouchi et al.

Takenouchi et al disclose an image forming apparatus comprising a transfer device 19 having a charge removing cloth (i.e. conductive fiber, Col. 21, lines 8-12) that is integrally attached to an attraction plate 191 for separating a transfer medium after transfer (Col. 21, lines 22-25).

Takenouchi et al further disclose a guide member 192 for guiding the transfer medium after transfer and the attraction plate with the charge removing cloth is arranged to be detachable from the guide member; an image is transferred from an image carrier 10 to the transfer medium by applying a transfer bias between a transfer roller 18 and the image carrier by a constant-current control device 180 (table 2, Col. 17), a leak member 19 is arranged in the vicinity of the transfer roller; the leak member

Art Unit: 2852

191 is made of conductive fibers and also functions as a charge removing member (Col. 21, lines 8-12), and is attached to a transfer medium guide member 192, the width of the leak member in the axial direction of the transfer roller is equal to the width of the maximum transfer medium (see Fig. 5, Fig. 19), the constant-current control means conduct the control on the basis of a temperature table (Col. 24, lines 45-67).

Allowable Subject Matter

4. Claims 2-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. The following is a statement of reasons for the indication of allowable subject matter: None of the prior art of record teaches the charge removing cloth having two or more layers which are allowed to be peeled off.

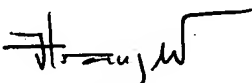

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hoang Ngo whose telephone number is (571) 272-2138. The examiner can normally be reached on 6:00am - 2:30pm.
